Submitted (OCT-1996) to the EMBL/GenBank/DDBJ databases.

-I-FUNCTION: La protein plays a role in the transcription of RNA
polymerase III. It is most probably a transcription termination
factor: Binds to the 3' termini of virtually all nascent
polymerase III transcripts. It is associated with precursor form
of RNA polymerase III transcripts including tRNA and 4.58, 58, 7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This SWISS-PROT entry is copyright. It is most probably a transcription termination factor. Binds to the 3' termini of virtually all nascent polymerase III transcripts. It is associated with precursor form of RNA polymerase III transcripts including them and a second
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          and 7-2 RNAs.
SUBURIT: Interacts with DDX15 (By similarity).
SUBCELLULAR LOCATION: Nuclear (Probable).
PTM: Phosphorylated (By similarity).

                                                                                                                                                                                                                                                       FUNCTION: La protein plays a role in the transcription of RNA polymerase III. It is most probably a transcription termination factor. Binds to the 3' termini of virtually all nascent polymerase III transcripts. It is associated with precursor forms of RNA polymerase III transcripts including tRNA and 4.5S, 5S, 7S

SUBUNIT: Interacts with DDX15 (By similarity).
SUBCELLULAR LOCATION: Nuclear (Probable).
SUBCELLULAR LOCATION: THE PHOSPHORYLATION SITES ARE AT THE PTM: PHOSPHORYLATED. THE PROTEIN.
SIMILARITY: Contains 1 RNA recognition motif (RRM) domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                polymerase III. It is most probably a transcription termination factor. Binds to the 3' termini of virtually all nascent polymerase III transcripts. It is associated with precursor for of RNA polymerase III transcripts including tRNA and 4.5S, 5S,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SWISS-PROT entry is copyright: It is produced through a ceen the Swiss Institute of Bioinformatics and the EMBL

SUMMARIES

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
